

Core Assignment Rules

Naming Conventions

XX = zero-padded assignment/exercise number (01, 02, etc.)

Case-sensitivity matters!

Type	Name Pattern
Assignment Branch	assignXX
Exercise Branch	exerciseXX or exerciseXX-*
Main Application Code File/Folder	AssignXX (unless otherwise stated)
Screenshots	AssignXX or AssignXX-*

Starting a New Assignment/Exercise

For each new assignment, you must do the following procedures:

- **Switch to the "main" branch**
- **Fetch any changes from remotes**
- **Pull changes from "upstream" remote repository (i.e., my repository)**
- **Create and check out a new branch for this assignment (e.g., assign01)**
- **Publish your new branch**
- **Complete assignment/exercise and make commits to this new branch**

Programming Assignments

- Programs **MUST** be written in **the language specified by the assignment!**
- **You must follow the naming conventions** for code files as specified in the assignment (*including case-sensitivity*)!
- **All assignment/exercise code and materials go in the SAME GitHub repo**
 - o **Exception:** final projects may use a different repo

Screenshots and Test Programs

Unless otherwise stated:

- Screenshot should go in the **screenshots** folder of the project.
- Check whether screenshot should also be put into README
- **If test code is provided, you MUST run the tests and send a screenshot of the test results!**
Even if your program(s) do not pass all the tests, you **MUST** send this screenshot!

Commit Rules

- **Commit after reasonable, discrete updates** → a commit should represent one logical change that you could describe clearly in a short commit message
 - o **Do NOT put an entire assignment/project into one giant commit**
 - o **Contrariwise, you do NOT need to make a million tiny commits**
- Use **Conventional Commits** as template for commit messages:
 - o Use appropriate type (e.g, fix, feat, build, docs, chore, etc.)
 - o Use only ONE type per commit
 - o Use imperative language (e.g., "fix: use correct upper bound value")
 - o Stage only the appropriate files
 - o Use BREAKING CHANGE or ! where relevant
- Ensure commits are on assignment/exercise branch
- **Avoid making commits directly on main branch**

README

Make sure README.md is updated as specified in the assignment!

Completing and Submitting an Assignment/Exercise

Once you have finished development on your branch, do the following:

- **Save and commit any changes on your branch**
- **Checkout the "main" branch**
- **Merge your branch into the "main" branch**
- **Commit as necessary and push changes to remote repository**

Be sure to do these steps BEFORE the relevant deadline!

Other Grading Metrics

Apart from any specific grading breakdown per assignment, I reserve the right to take points off for not meeting the specifications in the assignment description OR this document.

Other things that can be penalized:

- **Code that is not syntactically correct and/or does not compile (up to 60 points off!!!!)**
- Sloppy or poor coding style
- Bad coding design principles
- Code that crashes, does not run, or takes a VERY long time to complete
- Academic integrity violations (see syllabus)
